

Take your swimming experience to a higher level with Mineral Springs. Your pool will never look so good or felt so wonderful. Glide through smooth, clear, sparkling water with a simple system that takes only minutes per week.

The Mineral Springs Care System uses easy-to-apply minerals and a chlorine generator to create a soothing mineral spa-like environment. It takes only minutes a week to maintain. In fact, once you've started the system, you only need to add one product weekly. It's that simple!

**THE IDEAL CARE SYSTEM FOR POOLS WITH THE FOLLOWING CHARACTERISTICS:**

- Any size or surface type
- Equipped with a chlorine generator
- A pump that operates at least 10-12 hours per day

**RECOMMENDED FOR POOL OWNERS WHO:**

- Want reduced maintenance
- Want superior water quality
- Frequent travelers or vacation-takers

**THE ULTIMATE  
SALTWATER POOL  
EXPERIENCE**

*Mineral Springs*<sup>®</sup>  
by BioGuard.

#### MINERAL SPRINGS BEGINNINGS<sup>®</sup>

Apply the proprietary blend of minerals in Beginnings to pool water at start up to create a mineral bathing environment and to protect your equipment.

#### MINERAL SPRINGS RENEWAL<sup>®</sup>

Maintain soft, gentle, sparkling water with weekly applications of Renewal to replenish lost mineral levels and balance pH. Renewal also contains a filter aid to help maintain crystal-clear water.

#### MINERAL SPRINGS STAIN AND SCALE<sup>®</sup>

Stain and Scale protects pool and equipment from scale. It also protects the generator cell from scale build-up. When used with Convert, this product easily changes a straight saltwater system to the Mineral Springs System.

#### MINERAL SPRINGS CONVERT<sup>®</sup>

Convert is used to change your plain saltwater pool into a Mineral Springs pool. Now your water will sparkle all summer long and feel soft and smooth. Convert has SunShield<sup>®</sup> that protects chlorine from degrading due to sunlight.

## STEP-BY-STEP CONVERSION PROCESS

It's easy to convert your existing saltwater pool to a Mineral Springs system. Just follow the below steps:

- 1. TEST CHLORINE AND STABILIZER LEVELS**  
If chlorine residual is less than 1 ppm or stabilizer level is less than 20 ppm, apply 1 lb of BioGuard Super Soluble per 10,000 gallons of pool water. If chlorine residual is still low or water remains cloudy, an additional application may be needed.
- 2. APPLY MINERAL SPRINGS CONVERT**  
Add one bag per 5,000 gallons of pool water. This will change an ordinary saltwater pool into a mineral oasis.
- 3. APPLY MINERAL SPRINGS STAIN AND SCALE**  
Add one quart per 5,000 gallons of pool water. Stain and Scale will protect your pool and equipment from scale formation, and also protect the chlorine generator from scale buildup.
- 4. ADD MINERAL SPRINGS RENEWAL ON A WEEKLY BASIS**  
Used weekly for maintenance, Renewal will keep the pH of your pool water balanced. Renewal also includes SilkGuard Technology to soften the water, and SunShield to protect the chlorine from UV degradation. The feel and quality of your pool water is further enhanced by the built-in filter enhancer and water clarifier.
