Spa System Flush

Spa System Flush works like a rinse aid to help remove unseen build-up in the plumbing system and on the surface of spas. Removing unwanted build-up will help ensure that the circulation system is working more efficiently.

This is the same formulation currently included in Soft Soak TRIO.

Spa System Flush should be used at every drain and refill cycle. The spa should be completely drained after use.

Label directions are as follows:

1. *Use prior to draining, cleaning, and refilling your spa.*
2. *Remove cartridge filter and clean with SpaGuard Filter Cleaner per label directions.*
3. *Apply contents of bottle (24 oz) directly to the spa water with the pump on.*
4. *Circulate water for 15 minutes.*
5. *Turn pump off and completely drain spa water.*
6. *Clean the surface of your spa with Off The Wall Surface Cleaner.*
7. *Reinsert cleaned cartridge filter*
8. *Refill the spa, balance the water, and resume use.*

One bottle of Spa System Flush can be used on any size spa. Because the spa will be drained after application, there is no need to worry about over-dosing.

Spa System Flush may be used with any type of sanitizing system; however, it does not contain sanitizer. Always follow label directions on the sanitizer system being used in order to help control bacteria in the spa.
